## EDUCATION

**University of Virginia** Ph.D., Computer Science 2012  
• Advisor: [Professor Kamin Whitehouse](#)

**University of Louisville** M.Eng., Computer Engineering and Computer Science 2006  
• Advisor: [Professor Rammohan K. Ragade](#)

B.S., Computer Engineering and Computer Science 2005

## DISSERTATION

***A System for Tracking People in Homes for Smart Home Applications***  
People spend 62 percent of their time within the confines of their home. However, localization technologies such as GPS fail to accurately identify their indoor location. A key requirement of creating a smart home is both identifying each person and their current room location. This work addresses these challenges with a new hardware and software solution for indoor tracking.

## INTERESTS

Cyber-Physical Systems, Distributed Optimization, Distributed Systems, Machine Learning, Mobile Health (mHealth), Big-Data, Networking, Programming Abstractions, Smart Environments, Wireless Sensor and Embedded Networks

## PROFESSIONAL OBJECTIVE

I design and build open source software and technology to support reliable high-frequency data collection from mobile and wearable sensors to enable sensor-triggered just-in-time adaptive interventions as part of MD2K's "Big Data" solutions to quantify physical, biological, behavioral, social, and environmental factors that contribute to health and wellness in daily life.

## EMPLOYMENT

**Chief Software Architect** University of Memphis *August 2014–Present*  
NIH Center of Excellence for Mobile Sensor Data-to-Knowledge (MD2K)  
**Projects:** **Total: \$39.8 million**

- MD2K: Mobile Sensor Data-to-Knowledge  
NIH: 1U54EB020404 \$10.8 million
- mProv: Provenance-Based Data Analytics Cyberinfrastructure for High-frequency Mobile Sensor Data  
NSF: 1640813 \$4.0 million
- Socioeconomic status, stress, and smoking cessation  
NIH: 1R01CA190329 \$3.1 million
- Eliminating Tobacco-Related Disparities among African American Smokers  
NIH: 5R01MD010362 \$3.8 million
- ROBAS: A Multimodal Sensor System for Remote Assessment of Oral Health Behaviors  
NIH: 5R01DE025244 \$3.1 million
- mPerf: A Theory-driven Approach to Model and Predict Everyday job Performance Using Mobile Sensors  
IARPA: \$15.0 million

**Assistant Professor** University of Memphis *2011–2014*  
Research focusing on indoor tracking and navigation systems, mobile health interventions, and body sensor networks.

**Graduate Student Researcher** University of Virginia 2006–2012  
Research focused on programming systems, languages, and data analysis for large scale wireless embedded networks with Professor Whitehouse.  
• Guest Lecturer: Computer Networks (CS 457)

**Teaching Assistant** University of Virginia 2006–2008  
Courses:  
• Computer Networks (CS 457)  
• Program and Data Representation (CS 216)  
• Computer Architecture (CS 333)

SELECTED  
PROJECTS

*mCerebrum (University of Memphis)* 2014–Present  
• mCerebrum is a configurable software platform for mobile and wearable sensors. It provides support for reliable data collection from mobile and wearable sensors, and real-time processing of these data for sensor triggered just-in-time adaptive interventions.  
• <http://github.com/MD2Korg/>

*Cerebral Cortex (University of Memphis)* 2014–Present  
• Cerebral Cortex is a flexible layered big-data architecture designed around different functional layers so that each component can be adapted and extended without adversely affecting the other components. A Kernel links the layers to provide security controls between modules and a unified data interface to abstract implementation specifics.  
• <http://github.com/MD2Korg/>

*Smart home tracking (University of Virginia)* 2009–2012  
• Developed a hardware and software system that mounted at the top of doorways to track people in their homes  
• Does not require cameras or for individuals to carry anything special  
• Resulted in 90+% tracking accuracy  
• This deployment and software I developed resulted in over 2TB of data being produced and logged in a reliable manner  
• Demo: [https://www.youtube.com/watch?v=wAluI\\_uniK8](https://www.youtube.com/watch?v=wAluI_uniK8)

*MacroLab (University of Virginia)* 2007–2009  
• Developed a complete tool chain for running Matlab-like code on a distributed wireless sensor network.  
• Deployed and tested the system on a 50-node testbed  
• Resulting developed code size was reduced by a factor of 100  
• Additionally, developed a debugging environment to support the new programming abstraction

*K-Sense (University of Memphis)* 2013–2015  
• Advised and employed a graduate student to develop a wearable sensor platform for determining the kinematics of a human body  
• Designed to monitor and estimate calories in obese populations and during light-intensity activities  
• Future applications include various medical diagnostic systems

*SlamDroid (University of Memphis)* 2013  
• Advised an undergraduate student (now at Amazon) to develop an indoor localization and mapping (SLAM) technique for Android devices  
• This system has the potential to bring Google map style technology to indoor environments

*Lifesense (University of Memphis)* 2013  
• Advised and employed an undergraduate student to develop a complete sensor logging platform for Android devices  
• Designed to validate a user's identify on a smartphone based on weak-biometrics  
• Future applications include personel physical security, multi-factor computer authentication, or remote-validation of identity for banking.

*Traffic Optimizer (University of Memphis)* 2012  
• Advised and employed an undergraduate student (now at Wayfair) to develop a simulation frame-

work to test theories about real-time control of vehicle route planning and traffic light control

	<ul style="list-style-type: none"><li>COMP 6310 - Wireless Mobile Computing</li><li>COMP 7212 - Operating Systems</li></ul>	
	<b>University of Virginia</b> , Charlottesville, Virginia	
	<i>Ballroom Dance Technique Instructor</i>	2008–2010
	<ul style="list-style-type: none"><li>Augmented basic instruction for beginning dancers with technical details of the dances.</li></ul>	
COMMUNITY SERVICE	<i>Computer Science Research Day</i>	2012–2014
	<ul style="list-style-type: none"><li>Judged and/or organized this event.</li></ul>	
	<i>ACM 3D Printer Workshop</i>	2013
	<ul style="list-style-type: none"><li>Helped guide the student ACM group to apply for funding to build a 3d printer</li><li>Taught the basics of 3d modeling to grades 9-12.</li></ul>	
	<i>Computer Science Day</i>	2007–2014
	<ul style="list-style-type: none"><li>Demonstrated wireless sensor network technology to the general public.</li></ul>	
	<i>Google-Rise Camp</i>	2009–2010
	<ul style="list-style-type: none"><li>Presentation and demonstration of Wireless Sensor Networks to 7th and 8th graders.</li></ul>	
	<i>Engineering Day</i>	2005–2006
	<ul style="list-style-type: none"><li>Demonstration of current research to the general public.</li></ul>	
	<i>Computing Workshop for Kids</i>	2004

- Designed and taught a half-day workshop that introduced kids to programming and web design.

SKILLS

**Wireless Sensor Networks:** TinyOS, SnapPY, Contiki, Cooja, NesC, XBow, Sentilla (Moteiv)

**Wireless:** Protocols, Communication, Mesh Networking

**Matlab:** Embedded Matlab, Compiler Design, Statistics, Visualization, Machine Learning, Signal Processing

**Instrumentation and Control:** Simulink, Tektronix, National Instruments, Data Acquisition, Labview, Signal conditioning

**Operating systems:** Linux, Apple OS X, Microsoft Windows

**Programming languages:** C, C++, Java, Matlab, NesC, Perl, PHP, Python, UNIX Shell Scripting, SQL, SVN

**Applications:**  $\text{\TeX}$ ,  $\text{\LaTeX}$ ,  $\text{\BIBTeX}$ , and other common productivity packages for Windows, OS X, and Linux platforms
